

CARBON BOOST

2.2 Nitrogen

Typical Analysis

Phosphorus	215mg/100gm
Potassium	55gm/100gm
Boron	<4mg/kg
Calcium	50mg + 100mg mg/L
Cobalt	<0.02 mg/kg
Copper	.5mg/kg
Mercury	<0.02 mg/kg
Iron	2.15 mg/kg
Magnesium	100 to 250 mg/L
Molybdenum	<2 mg/L
Selenium	<5 mg/L
Sulphur	5g to 10 g/L
Zinc	3.8mg/kg

Contains 18 Amino Acids

Contains Molasses

CARBON BOOST

A premium fish hydrolysate enriched with high-quality biochar and a specialised seaweed tonic. This formulation delivers a rich, natural source of nutrients, including 18 essential amino acids, to support strong plant growth and improved soil health.

How It Works

- The fish hydrolysate provides readily available organic nitrogen and a full spectrum of marine-derived minerals to feed both plants and soil biology.
- Biochar enhances soil structure and regulates nutrient release, reducing losses from leaching and volatilisation.
- The seaweed tonic supplies additional micronutrients and natural growth stimulants to boost overall plant performance.

Benefits

- Supports vigorous growth and improved root development
- Enhances microbial activity and long-term soil fertility
 - Ideal for sustainable and regenerative farming systems

PRODUCTION DATE

APPLICATION

Apply at 30 litres per hectare (P/Ha).

Ground application:

Agitate well before use. Dilute at a ratio of 1 part Carbon Boost to 2 parts water and apply evenly across the treatment area.

Aerial application:

Agitate well before use. Apply undiluted.

Additional Information

No stock stand-down period required.
