BIFORCE[™] GRANULES

**For the control of certain pests
(ants, fleas and ticks) in turf in external
surrounds of buildings and structures.**

Active constituent: 2g/kg Bifenthrin

For use on turf, bark, compost heaps, dense vegetation, shrubs and gardens for the control of ants, Argentine stem, weevil, black beetle, sod webworm and other crawling insects.

General Instructions

For optimum results use a properly calibrated granule applicator.

Features and Benefits

- ▲ Will not damage sensitive plants or turf
- ▲ Small particle size - easy to spread
- ▲ Long-term residual action - fewer applications
- ▲ Low water solubility - stable over a wide range of environmental conditions (i.e. sunlight, heat, rain)
- ▲ Very low odour
- ▲ Superior insect control

www.keyindustries.co.nz

How to use:

Do NOT apply inside buildings. Do NOT apply within 2m of water (ponds, creeks, dams etc).

Broadcast Biforce Granular insecticide with suitable application equipment to ensure uniform coverage over the treatment area. To ensure optimal control of fleas, irrigate the treated area with 4-10mm of water immediately after application. Inspect treated areas for continuing activity.

Re-apply as required.

DIRECTIONS FOR USE

PEST	RATE & COMMENTS
Ants (all species):	Apply 600gm-2.2kg per 100m² Apply granules to areas where ants are active. Where possible apply directly to the nest. Use the low rate for light infestations. Use the high rate for heavy infestations and for maximum residual control.
Fleas & Ticks (adults and larvae)	Apply 1.1-2.2kg per 100m² For optimum results irrigate treated areas with up to 10mm water immediately after application. Use highest rate for treating areas with dense ground cover or heavy leaf litter.
Turf pests	Apply 600gm-2.2kg per 100m² Pests are Lawn army worm, sod worm, argentine stem weevil, African black beetle and ants. Refer to the product label for rates per pest species.
